Automotive Sheet Knowledge Transfer & Training Package

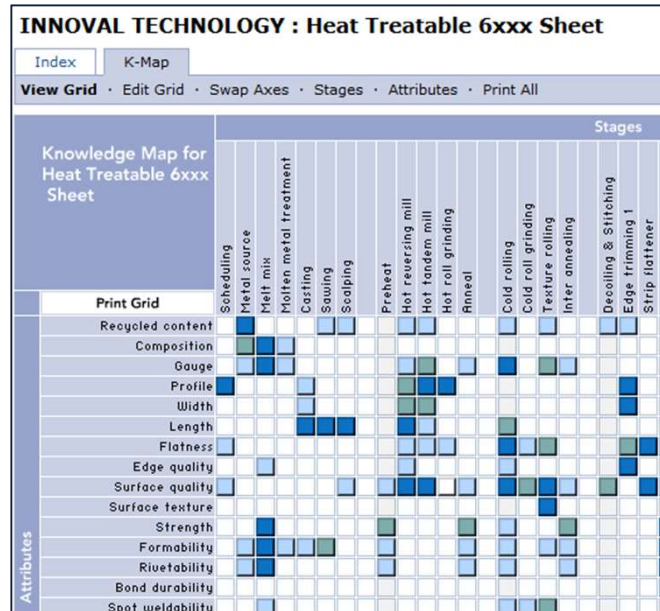

The package is made up of two parts:

- **Automotive Sheet Knowledge Map**

A K-Map holds a wealth of information that is easily accessible. It is a software product consisting of a matrix which explores the relationship between process stages and product attributes.

We create a K-Map specific to your process route and we populate it with our knowledge of automotive sheet production, including quality checks and specifications. Because each K-Map is unique to your operation, it will also contain detailed information about your equipment and processing parameters.

The finished K-Map will be mounted on your server for access by everyone (with the relevant permissions) whenever they need it. Part of a K-Map is shown on the next page.

3 day Automotive Sheet Training Course

The 3-day training course goes hand-in-hand with the K-Map. It serves as an introduction to automotive sheet manufacture for companies who are new to this product. A typical agenda is shown below:

	Day 1	Day 2	Day 3
0900-0930	Introduction to Innoval Technology	The OEM Supply Chain	Automotive Alloys and Property Control
0930-1130	Introduction to Aluminium	Aluminium Intensive Vehicle Manufacture	
1130-1230	Aluminium in Automotive	Introduction to K-Maps	Lab Testing/Slitting/Pack & Ship
1230-1330	LUNCH	LUNCH	LUNCH
1330-1430	Metallurgy Overview	Customer Attributes and Stages	K-Map Training (for Administrators only)
1430-1530	Surfaces and Corrosion Overview	Control of Surface Attributes
